AmeriClerkships Medical Society, in partnership with Larkin Community Teaching Hospital, is proud to offer a rare opportunity for its medical graduate members to enroll in Postgraduate Subinternships in >25 specialties, fully sanctioned by the Graduate Medical Education (GME) Department of Larkin Community Hospital, in the vibrant Miami, Florida! AMS members will rotate with top teaching attending physicians (and some even with program directors), be involved in patient care teams in both inpatient and outpatient settings, and be able to solicit for performance based letters of recommendation on official GME/teaching hospital letterheads upon successful completion of each clinical block. Please read more below, or visit [americlerkships.org/larkinsubi](americlerkships.org/larkinsubi) to apply for acceptance.

Description:
The Postgraduate Subinternship (PGSI) for AmeriClerkships medical graduate members at Larkin Community Teaching Hospital is designed to prepare residency candidates who graduated from medical school, for their role as PGY1 interns. After being processed through the Graduate Medical Education office for this Postgraduate Subinternship, you will begin to function as a subintern under the supervision of a resident, or a teaching attending physician, or a residency program faculty, or the program director (Supervisor). As a subintern, you will become a member of the team who provides care to patients seen in outpatient settings, and those admitted to the Supervisor’s inpatient service. The number of patients co-assigned to you as the subintern will be determined by the Supervisor and consultant on the service and will depend on the complexity of the cases, the number of patients, and your clinical skills. In conclusion of this Postgraduate Subinternship, the Graduate Medical Education office will provide AmeriClerkships an official clinical evaluation assessing your performance during this clinical block, and you may request a performance-based letter of recommendation on Graduate Medical Education's letterhead.

Scope of clinical activities:
As a Postgraduate Subintern at Larkin Community Teaching Hospital, you will be fully supervised by its Graduated Medical Education (GME) department, and follow the curriculum set by that office. You will never be the one who is responsible for the care being provided to patients, but rather you will be a member of existing teams who provide care to patients seen in outpatient settings, and those admitted to the Supervisor’s inpatient service. You are to introduce yourself by your full name, and designation as a “Subintern”; you are to never introduce yourself as a physician, or a doctor, or an MD or DO, or any other designation that would give the patient the impression that you are the one who is providing healthcare to them, or that you are partaking in any activities that would be considered the practice of medicine without a license. Patients are always first assigned to your Supervisors, then co-assigned to you. You will be fully supervised by a resident, or a teaching attending physician, or a residency program faculty, or the program director (Supervisor) who bears the full responsibility for patient care at all times, therefore you are never to function alone, or expected to make any decisions on your own. Your Supervisors will expect you to partake in tasks such as writing patient notes, assessments, plans, orders and treatment plans, as well as suggesting laboratory and ancillary tests, treatment plans and follow up care. Note that ALL TASKS must first be...
discussed, approved and co-signed by your immediate Supervisors, who may then delegate any subsequent duties under supervision. During call nights you will be assigned to a physician/resident supervisor who bears the call responsibilities; you are to always be within hearing and seeing distance of the physician/resident supervisor who is on call, and can hear and intervene on all pages/texts/requests for orders. The physician/resident supervisor who is on call is responsible for triaging all patients, and giving orders.

**Specific goals:**
1. To learn to participate as an integral member of a medical team.
2. To refine history-taking and physical examination skills.
3. To learn to formulate a problem list and prioritize medical problems.
4. To learn the judicious selection of laboratory and ancillary tests.
5. To learn to institute drug and supportive therapy.
6. To learn to manage acute and chronic medical problems including the use of consultative services.
7. To learn to develop definitive plans for ongoing care and follow-up of dismissed patients.

**Activity outline:**
1. The rotation begins on Monday and ends on Sunday. AMS Members are expected to work holidays, and have 100% attendance (unless other arrangements have been made with the Supervisors).
2. Attend medical grand rounds and conferences and seminars.
3. Under supervision, perform a comprehensive history and physical examination on patients (inpatient and outpatient).
4. Under supervision, formulate a complete patient problem list emphasizing differential diagnosis for active problems for the Supervisors to evaluate.
5. Under supervision, formulate a diagnostic and therapeutic plan for active problems for the Supervisors to evaluate.
6. Discuss the management of each new case with the Supervisors.
7. Under supervision, assist in performing procedures on assigned cases.
8. Under supervision, take call along with the Supervisors at least once a week. Call and days off should be coordinated with the call schedule of the Supervisors on the service whenever possible.
9. When approved by the Supervisors and when available, and always within hearing and seeing distance of the physician/resident supervisor who is on call, carry the service pager during call nights until 11 p.m. The physician/resident supervisor who is on call is responsible for your supervision, triaging all patients, and giving orders. After 11 p.m., the on-call Supervisor will carry the service pager. If problems that require patient assessment arise on the service after 11 p.m., the on-call Supervisors or resident may contact the subintern to participate.
10. Under supervision, follow the care of two patients at the beginning of the rotation, if a medical student or resident is rotating off the service at the time.
11. Present each new admission to the attending and other members of the service, after patients have been initially admitted and stabilized by Supervisors.
12. Discuss all orders for assigned patients for the Supervisors to evaluate. If permitted to write in patient charts, all orders must be co-signed by the Supervisor(s) or the resident on the service.
13. Visit each patient at least twice daily (early mornings and again in the afternoon or evening). Under supervision, write progress notes at least once daily on all inpatients for the Supervisors to evaluate.
14. Under supervision, prepare discharge and off-service summaries on all patients and arrange for follow-up care for the Supervisors to evaluate.
15. "Sign out" to the Supervisors AND on-call resident when leaving the hospital to inform them about the status of the patients on his/her service.
16. The subintern should wear a nametag at all times.
17. Absences should not be scheduled during this Postgraduate Subinternship.

Method of evaluation:
AMS members are evaluated by the supervising staff consultant, the senior medical resident assigned to the service and other residents assigned to the service.

Absolute enrollment criteria:
1. Willing and able to legally reside in Miami, Florida (U.S.) by at least 1 week prior to your desired start date.
2. Can communicate easily in English.
3. Have personal transportation (not rely on public transportation).
4. Be available 24/7 (no time off or holidays; 100% mandatory attendance unless arranged with supervisors; expect to be present ~12 hours/day + calls + early mornings & weekend patient rounds).
5. Minimum 4 weeks of U.S. clinical experience within the last 5 years (AmeriClerkships type clinicals experience preferred).
6. Enrollment Quality Control interview with AmeriClerkships Chief Clinical Officer.
7. Flu shot and annual physical exam, in addition to regular AMS required documents for enrollment.

Preference will be given to Postgraduate Subinternship applicants who have:
1. Passed at least one USMLE exam.
2. Graduated from medical school within 5 years.
3. Has completed U.S. clinical experiences through AmeriClerkships within the last 2 years.

Larkin, Single GME System and International Medical Graduates (IMG):
In addition to the above stated benefits, IMGs may soon benefit from the 2014 agreement which was entered into between ACGME (allopathic [MD] accredited residencies) and AOA (osteopathic [DO] accredited residencies), allowing AOA-approved training programs in existence on 7/1/2015, to elect to apply for ACGME “pre-accreditation” status, making way for the possibility of IMGs applying to certain AOA/ACGME accredited residency programs by as early as the 2016 Match. As the host to 32 residencies and fellowships, Larkin Community Teaching Hospital (www.graduatemedicaleducation.org/) is recognized as the United State’s largest osteopathic teaching hospital system by number of residencies and trainees, and is planning to transition its AOA accredited residencies and fellowships to ACGME “Pre-accredited” status over the next several years. This means that IMGs may be able to apply to a number of Larkin’s residencies during the 2016-2018 Match, and IMGs who successfully complete a series of Postgraduate Subinternships at Larkin (with accompanying Larkin letters of recommendation) may stand a better chance at being considered for interviews by Larkin residency program directors.

Current medical residencies and fellowships hosted by Larkin:
● 1 Internship (traditional rotating internship in IM, FM, GS, OB, PEDS, EM, analogous to PGY1 Preliminary or Transitional year)
● 13 AOA Residencies (again, soon to be transitioned to ACGME/AOA accredited status):
  1. Anesthesiology
  2. Dermatology
  3. Diagnostic Radiology
  4. Family Medicine
  5. Family Medicine/Neuromuscular Medicine (FM/NMM)
  6. Neuromuscular Medicine
